Research studies currently active.

In addition to holding brief descriptions of the projects, these wiki pages are used by the lab to document ongoing work (for example, software programming notes).

We like to write lots of notes on the fly. The waist-deep-in-a-project, nuts-and-bolts documentation pages are usually only available to lab members.

We are happy to share code and techniques upon request.

Multiple Neural Pathways for Encoding Visual Shape

Dorsal Visual Cortex Processes for Shape Perception

Shape of 3D concavities

[fMRI of perceiving shape from 3D concavities](#)

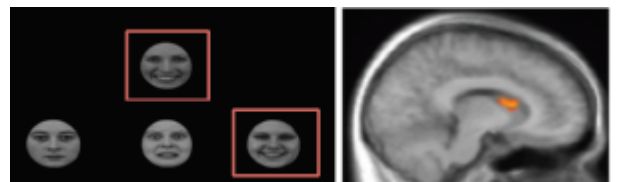

3D letter recognition

[3D letter recognition and visual crowding](#)

Role of the Basal Ganglia in Shape-based Object Recognition

[Holistic perception in Parkinson's Disease](#)

Influence of Physical Size on Perception and Memory for Objects

Effect of real-world size on object shape perception

[Physical Size and Holistic Perception](#)

[fMRI Study on Physical Size and Holistic Perception](#)

Effects of large-scale spatial separation on word item memory

[Learning in Large-Scale Interactive Displays](#)

Identifying Object Shape Features

How does the visual system identify parts of common objects?

[Crowding and parts-based recognition](#)

[Deferred decisions in object recognition](#)

Which face features do we use to recognize different

emotions?

[Name That Emotion!](#)

Detecting clusters of objects

[What is a Cluster?](#)

Visual Numeracy

Cortical networks for understanding numbers

Mathematical Ways of Operating - Neural Correlates

[Mathematical Ways of Operating - Neural Correlates](#)

Meta-analysis of numeracy neuroimaging

[Meta-analysis of intraparietal sulcus \(IPS\) fMRI activation during numerical reasoning](#)

How does visual grouping affect enumeration?

[Visual Number Sense](#)

[Visual Number Sense fMRI](#)

Visual Esthetics

[Color preference](#)
